Continuation of 5. does NOT place the application in condition for allowance because: The Declaration filed December 21, 2001 does not provide evidence of unexpected results for the following reasons.

The compositions in Table 1, which applicant states are directed to claims 4-8, do not have the same resin and thus the compositions can not be compared. Applicant argues the inventive examples showing an unexpected decrease in defects "are obtained by the combination of claimed resin and the claimed solvent". Claims 4-8 do not read on a solvent and no solvent is included in Table 1. If applicant ment to say surface active agent, rather than solvent, the results are still not unexpected because the purpose of including a surface active agent in the composition is to aid in the coating of the composition, thus improvements in the properties of the composition are expected.

The compositions in Table 2, which applicant states are directed to claims 9-13, again have different resins. Applicant argues the solvent mixture S1/S3 is within the scope of the present invention, however, this is not the case. Solvent S1, as defined on page 145 of the specification is propylene glycol monomethyl ether acetate. Claim 9 does not read on this solvent but propylene glycol monoalkyl ether. Additionally, the results from the solvent mixture S2/S3 can not be used because solvent S2 is propylene glycol monomethyl ether propionate which also is not claimed in claim 9. Additionally, the solvents in Table 2 of the Declaration are not commensurate in scope with the claimed solvents in claim 9 which read on propylene glycol monoalkyl ether wherein the alkyl group is not defined.
